

Technology Governance Program Guide

A complete overview of the Centience governance model — Assessment, Roadmap, and ongoing Program.

The Governance Gap

Most regulated organizations face a critical gap between technology operations and governance oversight:

- IT teams focus on uptime and user support, not regulatory compliance.
- Compliance teams write policies but cannot verify technical enforcement.
- Leadership lacks visibility into whether governance controls are actually working.
- Regulatory examiners increasingly expect integrated technology governance.
- Point solutions create compliance islands without unified oversight.

The Centience Model

The Centience governance model operates in three integrated phases:

- ✓ Phase 1 — Assessment: Comprehensive evaluation of infrastructure, security, and compliance posture against regulatory requirements.
- ✓ Phase 2 — Roadmap: Prioritized remediation plan with defined timelines, responsibilities, and resource requirements.
- ✓ Phase 3 — Program: Ongoing managed governance with continuous monitoring, reporting, and regulatory alignment.

Assessment Framework

The governance assessment evaluates six critical domains:

- Infrastructure Management: Endpoint, network, cloud, and identity governance.
- Cybersecurity Controls: Threat detection, incident response, and vulnerability management.
- Data Protection: Encryption, backup, DLP, and data classification.
- Access Management: Identity governance, MFA, privileged access, and lifecycle management.
- AI Governance: AI inventory, risk classification, and usage policies.
- Compliance Readiness: Documentation, evidence collection, and examination preparation.

Implementation Checklist

- Complete governance assessment across all six domains
- Develop prioritized remediation roadmap with timelines
- Establish governance committee with executive sponsorship
- Deploy managed infrastructure as governance foundation
- Implement continuous monitoring and compliance reporting
- Create examination-ready documentation and evidence packages
- Schedule quarterly governance reviews with leadership
- Engage external validation annually

Ongoing Program Management

A governance program requires continuous attention:

- Monthly compliance monitoring with automated dashboards.
- Quarterly governance reviews with documented findings.
- Annual comprehensive reassessment and roadmap updates.
- Continuous regulatory monitoring and policy updates.
- Staff training on governance policies and procedures.
- Board-level governance reporting with risk metrics.
